USEFUL RESOURCES

GeoTrellis

Geo Trellis is an open source geographic data processing engine for high performance applications. The framework is built with Scala and Akka.

Currently monitoring 14877 Spatial Web services with 324891 known data offerings around the world

Arctic
Ocean

Arctic
Ocean

Spatineo Directory

SPATINEO - A Spatial Web Services monitor

Spatineo is focused on improving the Quality of Service of your geospatial web services. Spatineo's specialties are monitoring, reporting and performance testing services for spatial web services as well as INSPIRE and OGC expertise.

GeoCAT

Geospatial Conservation Assessment Tool

Perform rapid geospatial analysis of species in a simple and powerful way.

[Start a new project](#)

or [import a .geocat/.rfa file](#)

Geospatial Conservation Assessment Tool (GeoCAT)

Perform rapid geospatial analysis of species in a simple and powerful way.

Mapbender3

Mapbender – Back Office software and client framework for spatial data infrastructures

Mapbender is the back office software and client framework for spatial data infrastructures. The software is implemented in PHP und JavaScript and [dual licensed](#) under [GNU GPL](#) and [Simplified BSD license](#). It provides a data model and web based interfaces for displaying, navigating and interacting with OGC compliant map services.

Mapbender3 is the successor of the Mapbender 2 Version and is based on the frameworks Symfony2, JQuery and OpenLayers.

OpenScienceMap 0.5

[OpenScienceMap 0.5](#) is here! And it is more than a small update, it is a huge step forward. There are many new things you can experience:

- **3D Buildings:** all buildings of OSM are now in OpenScienceMap! Touch ground and tilt the map!
- **Satellite imagery:** find satellite imagery in the “Layers” menu
- **Compass:** we now have a compass rose in the map view
- **Compass click-thru:** click on the rose to jump through position & compass settings
- **3D Compass:** tilt your device to tilt the map

- **Position viewshed:** the position indicator shows the direction you are facing and the accuracy of your positioning
- **Offscreen positioning:** the blurry animated indicator shows the direction of your current position
- **POIs:** we have a large number of POIs in the map
- **Better data:** we worked on some of the data and improved a lot.

SwathViewer [*DATA & VIEWER]

SwathViewer is a Java applet for viewing and downloading map data. To run SwathViewer visit the following link: <http://sv.gina.alaska.edu>.

Supported formats are WMS, KML, GPX, and ESRI Shapefile.

* ESRI Shapefiles are assumed to be unprojected and in the WGS84 datum.

* If you do "Save State" imported data will be inlined into the state file.

* WMS servers can be specified with or without the GetCapabilities parameter:

<http://wms.gina.alaska.edu/cgi-bin/bdl.cgi?service=wms&request=GetCapabilities>

<http://wms.gina.alaska.edu/cgi-bin/bdl.cgi>

Maperitive [*SOFTWARE]

Maperitive is a FREE desktop application for drawing maps based on OpenStreetMap and GPS data. You can define what gets on the map and how it is painted. You can also export these maps into bitmaps and SVG files and print them.

Intermountain Region Digital Image Archive Center (IRDIAC) - Landscape Tools [*TOOLS]

Geocoder

Geocoder is a library which helps you build geo-aware applications. It provides an abstraction layer for geocoding manipulations, as well as a powerful API.

Geocoder supports a lot of third-party services such as: [FreeGeopip](#), [HostIp](#), [IpInfoDB](#), [Google Maps](#), [Google Maps for Business](#), [Bing Maps](#), [OpenStreetMap](#), [CloudMade](#), [Geoip](#), [MapQuest](#), [OIORest](#), [GeoCoder.ca](#), [GeoCoder.us](#), [IGN OpenLS](#), [DataScienceToolkit](#), [Yandex](#), [GeoPlugin](#), [GeoIPs](#), [MaxMind web service](#), [MaxMind binary file](#), [Geonames](#), [IpGeoBase](#), [Baidu](#), [TomTom](#), and [ArcGIS Online](#).

Cameroon Spatial Data Infrastructure

GPlates

GPlates software for plate-tectonics [*SOFTWARE]

GPlates is desktop software for the interactive visualisation of plate-tectonics.

GPlates offers a novel combination of interactive plate-tectonic reconstructions, geographic information system (GIS) functionality and raster data visualisation. GPlates enables both the visualisation and the manipulation of plate-tectonic reconstructions and associated data through geological time. GPlates runs on Windows, Linux and MacOS X. GPlates has an online [user manual](#).

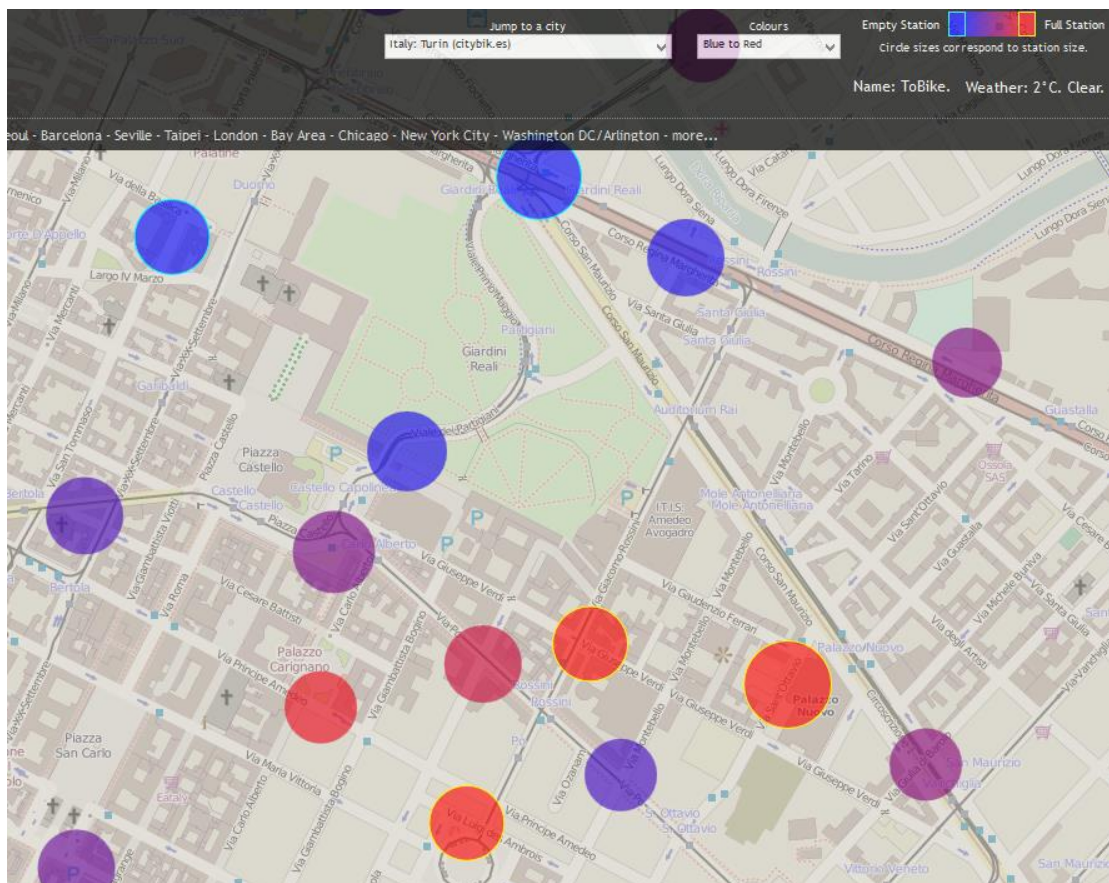

MAPYRUS

Mapyrus [*SOFTWARE]

Mapyrus is software for creating plots of points, lines, polygons and labels to PostScript (high resolution, up to A0 paper size), Portable Document Format (PDF), Scalable Vector Graphics (SVG) format and web image output formats.

BIKE SHARE MAP

OPEN STREET MAP TO GIS (.shp, .tab, kml, etc.)

This webservice allows you to transform [OpenStreetMap](#) data into GIS data (.shp, .tab, kml, etc.).

For performance reason, the area is limited to a given extent. Just zoom in the map to select the area you want to export until the button on the left is active (green color). Then, to adjust the area, you can resize the map container to the left or the bottom.

Creating the shapefile can take a long time. So we will send you an email at the end of the process. We won't store your address and we will not use it for anything else.

Deutschland

DB BAHN - LE FERROVIE TEDESCHE IN TEMPO REALE

The screenshot shows the DB Bahn website interface. On the left, there is a settings panel titled 'Einstellungen' with various options for displaying train data. The main area shows a map of Germany with numerous red circular markers representing train stations. A pop-up window for 'ICE 1654' is displayed, showing the current time as 10:31 and a table of stops.

Halt	Ankunft	Abfahrt	Gleis
Dresden Hbf		05:48	2
Fulda	09:42	09:44	3
Frankfurt(Main)Hbf	10:37 ca. +10	10:44 ca. +10	6
Wiesbaden Hbf	11:31 ca. +10		5

Below the table, there are options to 'Fahrten verfolgen', 'Route anzeigen', and 'Nur diesen Zug anzeigen', along with a button 'Alle Halte anzeigen'.

GISBox by Citiviz [*VM]

GISBox by Citiviz is a ready-to-use virtual appliance containing an assortment of powerful, free and open source GIS, Data Mining and Analysis, Modelling and Programming software and packages.

The pre-configured and tested GISBox allows you to try and use in few minutes a variety of software used by data scientists, engineers, physicists, mathematicians, geomatics engineers, and geographers from around the globe, without installing anything more than once the Oracle VirtualBox™ software (<https://www.virtualbox.org/>) on your Linux, Windows or Mac computer.

The GISBox is free and open, allowing it to be freely distributed, duplicated and passed around, even with your own datasets and in-house applications.

QGIS on the FLOSS Weekly podcast

Each week, the FLOSS Weekly podcast takes an hour-long look at exciting projects in the world of Free/Libre and Open Source Software. It recently covered QGIS (or Quantum GIS), which is a really nice, user friendly, Geographical Information Systems package for plotting and analysing map data.

SharpMap
Geospatial Application
Framework for the CLR

SharpMap

SharpMap is an easy-to-use mapping library for use in web and desktop applications. It provides access to [many types of GIS data](#), enables [spatial querying](#) of that data, and renders beautiful maps. The engine is written in C# and based on the .Net 4.0 framework. SharpMap is released under [GNU Lesser General Public License](#).

mapshaper v.0.1.11

Mapshaper (simplifying cartographic lines) [*TOOLS]

Mapshaper is a program for simplifying cartographic lines while preserving the topological relationships between adjacent polygons and intersecting polyline paths.

latest release

Demo »
User: demo PW: demo

Cartaro – web mapping platform

Cartaro is the web mapping platform that brings the power of the best open source geospatial components into a content management system. With Cartaro you are able to set-up and run your own geo-enabled and OGC standards-compliant website with not more than a few clicks. The geospatial components used in Cartaro are PostGIS, GeoServer, GeoWebCache and OpenLayers. All those are managed from within the powerful CMS Drupal.

PyAOS

Python for the Atmospheric and Oceanic Sciences

Python for the Atmospheric and Oceanic Sciences (PyAOS) [*TOOLS & *PROGRAMMING]

GRASS GIS

The world's leading Free GIS software

GRASS GIS on CDROM, DVD, USB sticks and Virtual Machine

GRASS GIS is available on various live [CDROMs/DVDs/USB](#) sticks. The variants below offer pre-installed GIS software (Live Linux). No need to install anything on the hard disk, you can just run it out-of-the-box by booting from the CD-ROM, DVD, or USB-stick. There is no need to install or configure Linux. The hard disk remains untouched.

Chi riceve un'idea da me ricava conoscenza senza diminuire la mia: così come colui che accende il suo cero dal mio riceve luce, senza lasciarmi al buio.
Thomas Jefferson

OpenGeoData: come utilizzarli su una mappa? Le scuole in Piemonte con un mash up usando Google Fusion Tables [*TUTORIAL]

GIS with Python, Shapely, and Fiona [*TOOLS]

Shapely does *manipulating and analyzing data*. It's based on GEOS, the standard library for doing that kind of thing, that is very fast. With Shapely, you can do things like buffers, unions, intersections, [centroids](#), [convex hulls](#), and lots more. It does it all quite efficiently.

Fiona does *reading and writing data formats*. For this it uses OGR, the most popular open-source conversion system. OGR is extremely powerful and [supports many, many formats](#) - it's used by [Mapnik](#), a tile rendering engine, to support more types of data, and used by people like me every day to convert formats.

Welcome to the Dapple Project home page

Dapple Project – Global Data Explorer

Dapple is based upon [NASA World Wind](#) project, specifically the World Wind .NET . NASA moved to a Java Based World Wind in 2006 and ceased further development of the .NET version. Geosoft continued to support the Dapple open source effort, however recent decisions by NASA to remove the BlueMarble image that Dapple was accessing as a base layer, plus the direction Microsoft has taken with .NET and Direct X has made the Dapple project direction unsustainable. For this reason Geosoft has decided to stop supporting the Dapple Open Source project.

GIS Lessons and Tools for a New Energy Generation

The GIS Lessons and Tools for a New Energy Generation is designed to provide teachers with activities and resources to explore wind and solar energy in the classroom. There are already a number of great lessons available that focus on various aspects these types of energy sources. The lessons and supporting resources found here use geographic information systems (GIS) to get students to think about characteristics that influence the use of the sun and wind for the production of electricity in New York State. These lessons have been designed so that someone with little or no experience using GIS can incorporate these into their classroom by selecting the right supporting resource to use.

Boise Center Aerospace Laboratory

Boise Center Aerospace Laboratory (BCAL) LiDAR Tools [*ENVI]

BCAL LiDAR Tools are open-source tools developed for processing, analyzing and visualizing LiDAR data. They are written in IDL programming language and is intended to be used as add-on in the ENVI remote sensing software package.

Marine Geospatial Ecology Tools

Open source geoprocessing for marine research and conservation

Marine Geospatial Ecology Tools - Open source geoprocessing for marine research and conservation [*ARCGIS]

Marine Geospatial Ecology Tools (MGET) is a free, open-source geoprocessing toolbox that can help you solve a wide variety of marine research, conservation, and spatial planning problems. MGET plugs into ArcGIS and can perform tasks such as:

- Accessing oceanographic data from ArcGIS
- Identifying ecologically-relevant oceanographic features in remote sensing imagery
- Building predictive species distribution models
- Modeling habitat connectivity by simulating hydrodynamic dispersal of larvae
- Detecting spatiotemporal patterns in fisheries and other time series data

From GIS to Remote Sensing

A blog that goes from GIS to Remote Sensing, going through tutorials and tips especially for open source software. By Luca Congedo, the author of the Semi-Automatic Classification Plugin for QGIS that allows for supervised Land Cover classifications.

From GIS to Remote Sensing: Convert a Land Cover Classification from Raster to Vector in QGIS [*QGIS]

The instructions are for **QGIS 1.8**; also, the installations of the **SEXTANTE** plugin, and **SAGA** are required (for information about software installation see here). The SEXTANTE plugin is a framework that allows QGIS to execute the functions of other programs, such as SAGA GIS.

Frikart.no

Free maps for Garmin GPS [*DATA]

Based on data from OpenStreetMap we make maps for Garmin GPS. You will find the maps under the menu 'Maps for Garmin GPS' on the left side. We make both topographical hiking maps and road maps. By the way, the norwegian word frikart means free maps.

Energy Web Feltre Conoscenza condivisa e collaborativa della città e del suo comportamento energetico

Politecnico e Università di Torino - Laboratorio di Analisi e Rappresentazioni Territoriali ed Urbane [*LARTU*] -

Test Center ECDL-GIS - www.ecdlgis.polito.it - ecdl-gis@polito.it

Energy Web Feltre (EWF) è un'iniziativa di ricerca in tema di contenimento dei consumi energetici a scala urbana orientato alla definizione di un quadro di conoscenze dello stato difatto relativo ai consumi e alle emissioni da condividere via Web. Un sistema di informazioni a disposizione dei cittadini, delle amministrazioni locali e del settore produttivo che crea relazioni tra famiglie, amministrazioni, enti pubblici, il tutto orientato allo sviluppo di politiche di risparmio energetico e alla diffusione delle energie rinnovabili.

Il progetto si basa sulla costruzione di un modello digitale ad altissima risoluzione del territorio derivato dall'integrazione di più rilievi condotti con tecniche innovative (basate su scansioni laser e ortofoto ad altissima risoluzione) definito "City Model" sul quale associare un insieme di dati integrati riferiti allo stato energetico e comportamentale degli edifici o dei luoghi, definito "City Sensing". L'incrocio di tali insiemi porta alla creazione dell'"Energy Model", un livello di lettura integrato di tutte le informazioni raccolte che costituisce il cuore del quadro di conoscenze dello stato di fatto relativo ai consumi e alle emissioni sul territorio condiviso via Web.
